

OMEGA

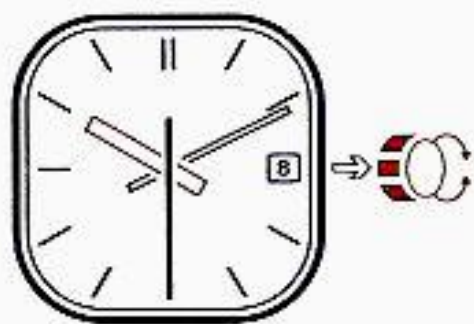

QUARTZ

CAL. 1342

HOW TO SET YOUR OMEGA QUARTZ

1. To set the hour

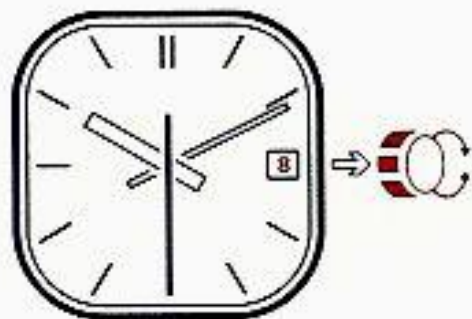

When converting to a different time zone or a new time schedule (daylight saving time), you can change the hour without affecting the precision of the second and minute hands: pull out the crown and turn the hour hand in the desired direction. (It will reposition itself automatically.) Then push the crown back into neutral position.

2. To set the date

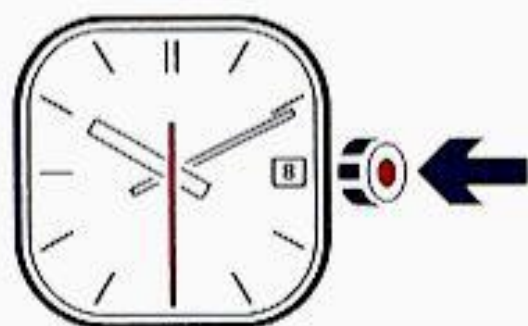

Pull out the crown and turn it until the desired date appears. Then push crown back into neutral position.

This operation does not affect the performance of the minute and second hands.

3. To set the second

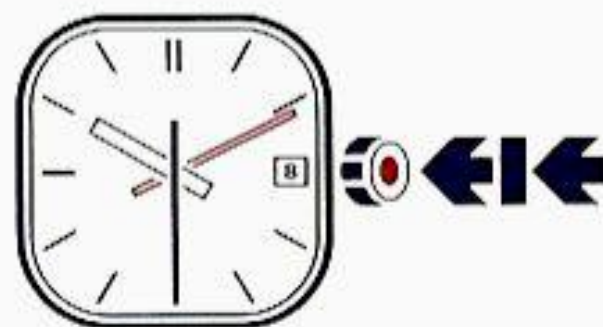

3.1. Running fast. - To stop the second hand: one continuous press on the button found in the centre of the crown (using a ballpoint pen tip, for example). Release button when the second hand coincides with an official time signal (telephone, radio).

3.2. Running slow. - Each quick press on the button found in the centre of the crown makes the second hand advance by one second.

4. To set the minute

Press continuously for at least five seconds the button found in the centre of the crown. Release the button - then press it in again immediately: the second hand begins turning rapidly, drawing along the minute hand. Continue pressing until the desired minute is reached.

To reset the time completely. - Always set the minute hand first, then the date and the hour hand (which repositions itself automatically in terms of the new position of the minute hand) - and finally the second hand.
